

Airport-grade large-core fiber optic CWDM

Overview

Using a pair of single-mode fibers, this module achieves a maximum transmission rate of 25.78Gbps over distances up to 20km, making it an ideal choice for metro aggregation and medium-distance DCI interconnection. The C-LIGHT CWDM product line covers multiple wavelength channel. Against the backdrop of increasingly strained transmission links and fiber optic resources on the base station side, Coarse Wavelength Division Multiplexing (CWDM) technology, with its significant wavelength multiplexing capability, is becoming the mainstream choice for 25G Ethernet and 5G. Among various 100G optical module solutions, CWDM4 has become the mainstream choice for short-distance interconnects in data centers due to its high cost-performance ratio, moderate transmission distance, and low power consumption. This article focuses on the typical application scenarios and. By comparing CWDM vs DWDM vs MWDM vs LWDM vs SWDM, you can make an informed decision to ensure your network meets your data capacity, distance, and application requirements. Choosing the right wavelength division multiplexing technology guarantees optimal network performance tailored to your needs.
