

Automatic fiber optic cable sealing reel

AI Overview

Automatic fiber optic cable reels are motorized or modular systems designed for safe, efficient deployment, storage, and protection of fiber optic cables in industrial, military, and field applications.

Key Features

Motorized Automation: Many automatic reels, such as the EESC660D, are powered by AC or DC electric motors, allowing cables to be extended or retracted automatically to a desired length. This improves safety, reduces manual handling, and increases deployment efficiency . **Durable Construction:** Reels are typically built with heavy-duty steel frames or impact-modified polymers, providing abrasion resistance, corrosion protection, and vibration-proof performance. Some models include stainless steel components for enhanced durability . **Portability and Modularity:** Systems like the Modular Advanced Reel System (MARS®) are lightweight, stackable, and modular, allowing for easy transport and flexible deployment in harsh environments. Accessories such as backpacks, tripods, and transit cases enhance mobility . **Cable Protection:** Automatic reels maintain the proper bend radius of fiber optic cables, preventing kinks and damage. Many reels include features like connector cradles, built-in dividers, and fiber cleaning kit storage to ensure cable integrity during deployment and storage . **Customization Options:** Reels can be tailored for specific cable types, lengths, and connectors. Armored tactical fiber optic reels are available for temporary field deployment, supporting multiple uses without kinking and with options for MPO/MTP or outdoor fiber patch cords .

Applications
