

Cannot delete cable trays in CAD

AI Overview

You may be unable to delete a cable tray in CAD because it is part of a connected network, overlapping with other segments, or constrained by software rules; resolving this often involves splitting, cutting, or using undo/redo commands.

Common Reasons You Cannot Delete a Cable Tray

-

Connected Segments: Cable trays are often part of a continuous network. If a tray is connected to other segments, the software may prevent deletion to maintain network integrity. Ensure the tray is not joined to other parts or nodes .

-

Overlapping or Partial Duplicates: If the tray overlaps with another tray or is partially duplicated, deletion may fail. CAD programs can detect and remove exact duplicates but may not allow deletion of partial overlaps .

-

Software Constraints: Some CAD programs, like AutoCAD MEP, require specific commands to remove segments. Using standard delete may not work if the tray is part of a routed system .

Solutions to Delete or Modify Cable Trays
