

Connecting a power distribution box socket in Algeria

AI Overview

In Algeria, connect sockets from a distribution box using type F outlets, 230V AC, 50Hz, with proper grounding and protective devices like MCBs and RCCBs.

Electrical Standards in Algeria

Algeria uses type F sockets as the standard, which are grounded and compatible with type C plugs. The mains voltage is 230 volts at 50 Hz. Type C sockets are generally not installed anymore because they are ungrounded and considered unsafe . When wiring a socket, always ensure it is a type F grounded outlet to comply with local safety regulations.

Distribution Box Wiring Basics

A Distribution Board (DB) distributes electrical power from the main supply to subcircuits, including sockets, lighting, and appliances . Key components include:

- Main isolator: Acts as the main switch to open or close the phase and neutral lines.
- RCCB (Residual Current Circuit Breaker): Protects against current leakage and electric shock.
- MCBs (Miniature Circuit Breakers): Protect individual subcircuits from overload or short circuits.
- Neutral and Earth links: Ensure proper grounding and safe operation.

Step-by-Step Socket Connection
