

Cut at a 90-degree bend in the cable tray

Overview

Creating a 90-degree elbow in an electrical cable tray, often called a "fabricated" or "mitered" bend, involves cutting, bending, and fastening a straight section of tray. The most common method involves creating two 45-degree cuts to form a 90-degree angle. Do you want a hard 90 or 2 spaced out 45° bends?

Need dimension of tray first width x side wall. Also need to know if you're bending inside or. The method for producing bridge bend elbows is as follows: Take a 90-degree cable tray bend elbow as an example, and apply the same principles for 45-degree bends accordingly. The length of the bottom side (bottom diagonal) after bending the cable tray should be equal to the width of the cable. OTHER THAN 90° JUNCTIONS Use this guide to learn the most effective installation practices when installing Cablofil tray.
