

# Does the wireless router have fiber optic cable

## AI Overview

A wireless router does not directly have a fiber optic cable input; it requires an Optical Network Terminal (ONT) or modem to convert the fiber signal before connecting via Ethernet.

### How Fiber Connects to a Wireless Router

Fiber optic internet delivers data using light signals through thin glass or plastic strands, which cannot be directly interpreted by standard routers. To use fiber with a wireless router, you need an ONT or fiber modem provided by your ISP. The ONT converts the optical signals into electrical signals that the router can understand and distribute wirelessly throughout your home .

### Required Equipment

- Fiber Optic Cable – Connects from the ISP's wall outlet to the ONT .
- Optical Network Terminal (ONT) – Converts light signals from the fiber into Ethernet signals for the router .
- Wireless Router – Receives the Ethernet signal from the ONT and broadcasts Wi-Fi to devices .
- Ethernet Cable – Links the ONT to the router's WAN port .
- Power Supply – Powers both the ONT and the router.

### Router Compatibility
