

Fixed distribution box on channel steel

AI Overview

A metal distribution box can be securely mounted on channel steel using appropriate brackets, fasteners, and DIN-rail or surface-mount configurations.

Choosing the Right Channel Steel

Channel steel, often supplied as Unistrut or compatible struts, comes in various sizes such as 41 x 21mm, 41 x 41mm, 41 x 62mm, and 41 x 83mm, with plain or slotted profiles for easier fixing . For heavier distribution boxes, heavier-duty box sections or back-to-back channel arrangements provide additional support . Channels are available in pre-galvanised, hot-dip galvanised, or stainless steel, which is important for corrosion resistance depending on indoor or outdoor installation .

Selecting the Distribution Box

Metal distribution boxes, like the MDC series, are made from high-quality steel sheet with a matt-finish polyester powder coating . They are designed for DIN-rail mounting or surface mounting, with knockouts on the top, bottom, and back for cable entry . Ensure the box size and weight are compatible with the chosen channel steel.

Mounting Techniques

- DIN-Rail Mounting:
 - If the distribution box supports DIN-rails, attach a DIN-rail to the channel steel using channel brackets or clamps.
 - Snap the distribution box onto the DIN-rail, ensuring it is level and secure .
