

Ground wire flat copper wire for distribution box

AI Overview

Flat copper or copper-clad aluminum wires are commonly used for grounding distribution boxes, offering excellent conductivity, flexibility, and NEC-compliant safety.

Types of Grounding Wires

1. Copper-Clad Aluminum Flat Wire

- **Material:** Aluminum core with a copper outer layer, combining lightweight design with good electrical conductivity.
- **Applications:** Ideal for grounding cable trays, distribution box doors, and electrical cabinets.
- **Advantages:** Lower cost and lighter than pure copper, while maintaining sufficient conductivity for most residential and commercial applications.

• **Considerations:** Suitable for environments with moderate corrosion; thicker gauges may be needed in humid or corrosive conditions .

2. Copper Braid or Flat Copper Wire

- **Material:** Pure copper strands woven into a flexible braid or flat strip.
- **Applications:** Used where mechanical strength, flexibility, and corrosion resistance are critical, such as in complex panel layouts or tight spaces.
- **Advantages:** Excellent flexibility for routing around corners and through tight spaces; superior durability and conductivity.
- **Considerations:** Higher cost compared to copper-clad aluminum .
