

High-sensitivity fiberglass drift tail

Overview

They're built from carbon fiber sheets bonded with resin, creating a stiff, lightweight blank. That stiffness is what makes them so sensitive; you can feel a perch breathe on your bait. Soft-tail floats and hard-tail floats are commonly used floating devices for fishing, and they are obviously different in terms of material, sensitivity and usage. This soft tail design. High Sensitivity Length:44-60CM (17. 62in) Color Change Feature Equipped with high sensitivity, this fishing float reacts quickly to even the slightest bite, ensuring you don't miss out on a catch.
