

# How to install invisible fiber optic cables to a router

## AI Overview

You can install an invisible fiber optic cable on a router by carefully routing ultra-thin, bend-insensitive fiber along walls or surfaces using adhesive, then connecting it to your router via media converters or compatible ports.

### Equipment Needed

- Invisible fiber optic cable: Ultra-thin, bend-insensitive single-mode fiber (e.g., G.657.B3) less than 1mm in diameter for near-invisible installation .
- Media converter or transceiver: Converts fiber signals to Ethernet for router compatibility .
- Adhesive or hot melt glue tool: For securing the fiber along walls, ceilings, or door frames .
- Corner protectors: Maintain minimum bending radius (~5mm) to prevent signal loss .
- Router with WAN/SFP port: Ensure your router supports fiber input or can accept Ethernet from a media converter .

### Installation Steps

- Plan the Route: Map the path from your fiber entry point to the router, avoiding sharp bends and heat sources.
- Prepare the Fiber: If using a micro-cable, strip the outer protective layer if required .
