

How to wire the distribution box on the support column

AI Overview

Wiring a distribution box on a support column requires secure mounting, proper breaker arrangement, correct wire connections, grounding, and safety checks to ensure a compliant and safe electrical system.

Mounting the Distribution Box

- Secure the box to the support column using appropriate brackets or fasteners, ensuring it is stable and at an accessible height (typically around 1.5 meters) for easy operation and maintenance .
- Check the environment: Ensure the column location is dry, well-ventilated, and free from obstructions. For outdoor installations, select a box with a suitable IP or NEMA rating to protect against dust and water .

Wiring Preparation

- Turn off the main power before starting any wiring to prevent electrical shock .
- Select the correct wire gauge based on the load: typically 2.5mm² for lighting and sockets, 4mm² for high-power appliances like air conditioners .
- Follow color coding standards: neutral wires are blue, phase wires are yellow (A), green (B), and red (C) for three-phase systems; single-phase systems use brown/red for live and blue for neutral .

Circuit Breaker Arrangement
