

Huawei Optical Module Encoding Rules

Overview

The encoding formats include T (twisted pair), X (8B/10B), R (64B/66B), and W (WIS). 10 indicates the number of channels. Optical modules with the same standards can interoperate with each other. The standards define the rate, wavelength, and transmission distance of optical modules, but not their encapsulation modes (two interoperated optical modules can have different encapsulation modes). If you need to achieve. On an optical network, a sender needs to convert electrical signals into optical signals before sending them to a receiver, and the receiver needs to convert received optical signals into electrical signals. If you need to achieve. HUAWEI TECHNOLOGIES CO. Copyright © Huawei Technologies Co. The purchased products, services and features are stipulated by the contract made between. If an optical module has been certified by Huawei, its label contains "HUAWEI", as shown in Figure 8-1. In the display elabel command output, the Manufactured field displays a date later than 2013-07-01.

OPTICAL MODULES FOR HUAWEI S SERIES SWITCHES

If an optical module is installed in a running switch, you can run the display transceiver command to view parameters of the optical module, including the center wavelength, transmission distance, fiber types

Introduction of Optical Modules on Huawei Switches

When Huawei switches are connected to other products such as routers, comply with the preceding optical module interoperation rules. The following describes
