

Installation Instructions for a 10kW Solar Communication System

AI Overview

A 10kW solar communication system requires careful installation of solar panels, inverter, batteries, and grounding, following safety protocols and proper wiring sequences.

System Preparation

Before installation, ensure all power sources are disconnected and wear appropriate personal protective equipment (PPE) such as gloves and eye protection . Verify that your roof or installation area has sufficient space—approximately 530 square feet for a 10kW system using 400W panels . Obtain all necessary permits and follow local electrical codes .

Mounting Solar Panels

- Arrange panels in strings according to the inverter's dual PV input configuration (e.g., 12 panels in two strings of 6 each), .
- Mount panels securely on a non-flammable, solid surface with proper tilt and orientation for maximum sunlight exposure .
- Ensure correct polarity when connecting panels to the inverter .

Inverter Installation

- Select a dry, ventilated location away from direct sunlight and moisture, with at least 20 cm clearance on the sides and 50 cm above and below .
