

Mauritania's Fiber Optic Cable Integration

AI Overview

Mauritania is expanding its national fiber network and establishing a second international submarine cable to enhance connectivity, resilience, and digital transformation.

National Fiber Optic Expansion

Mauritania has already deployed over 5,500 kilometers of fiber optic cable and plans to install an additional 2,300 kilometers to connect all wilayas and moughatas, ensuring nationwide coverage. This initiative is part of the Digital Agenda 2022-2025, which aims to leverage digital infrastructure for socio-economic development, e-government, and the growth of startups and technological ecosystems. The expansion includes creating looped networks to improve resilience and service quality, while a fiber optic training program is being implemented to develop local technical expertise for installation, operation, and maintenance.

International Submarine Cable Projects

Mauritania currently relies on the ACE (Africa Coast to Europe) submarine cable for international connectivity. To diversify and strengthen its digital infrastructure, the country is deploying a second submarine cable via EllaLink, which will directly connect Mauritania to Madrid, Spain. The project includes:

- A 670 km subsea branch from the main EllaLink trunk to a new cable landing station in Nouadhibou.
