

New Zealand Stock QSFP Optical Modules

QSFP

AI Overview

QSFP (Quad Small Form-factor Pluggable) optical modules are high-speed transceivers widely used in New Zealand for data center and enterprise networking, supporting speeds from 40Gbps to 800Gbps depending on the module type.

Overview of QSFP Modules

QSFP modules integrate four-lane signals into a single module, providing four times the throughput of standard SFP modules. Common types include:

- QSFP+: Supports 40Gbps, suitable for Ethernet, Fibre Channel, and InfiniBand applications .
- QSFP28: Supports 100Gbps, often used in high-performance data centers .
- QSFP-DD: Double-density modules supporting 200Gbps to 400Gbps, with some coherent optics reaching 800Gbps for long-distance DWDM links .

Types and Connectivity

QSFP modules are available in various configurations for different distances and cabling:

- Direct Attach Copper (DAC): Short-range, typically up to 7-10 meters, ideal for connecting adjacent switches .
- Active Optical Cable (AOC): Medium to long-range connections, converting electrical signals to optical for distances up to hundreds of meters .
