

Price chart for assembling cable tray supports

AI Overview

Cable tray support assemblies, such as GI C-channel and Z-supports, are available online starting from competitive prices depending on material, gauge, and load capacity.

Overview

Cable tray support assemblies are essential for securely mounting cable trays in commercial, industrial, and infrastructure projects. They provide stability, prevent sagging, and ensure proper alignment of cable management systems. Common types include C-channel supports and Z-supports, typically made from galvanized iron (GI) for corrosion resistance and durability. These supports are suitable for both indoor and demanding industrial environments.

Pricing Factors

The price of a cable tray support assembly depends on several factors:

- **Material and Coating:** Galvanized iron is standard; stainless steel or powder-coated options may cost more.
- **Gauge/Thickness:** Common gauges include 14 SWG, 16 SWG, and 18 SWG. Thicker gauges provide higher load capacity and durability, which increases the price.
- **Design Type:** C-channel supports and Z-supports differ in structural design and installation flexibility, affecting cost.
