

Price of 35kV busbar bridge

AI Overview

The cost of a 35kV busbar bridge typically ranges from \$3,000 to \$10,000 or more, depending on material, insulation, and customization.

Factors Affecting Cost

- **Material Type:** Copper busbars are more expensive due to higher conductivity and corrosion resistance, while aluminum busbars are lighter and more cost-effective for many applications .
- **Conductor Size:** Larger cross-sectional areas increase material usage and cost.
- **Insulation and Coatings:** Busbars designed for outdoor or harsh environments may require epoxy coatings or advanced insulation, which adds to the price .
- **Manufacturing Complexity:** Custom designs, precise tolerances, and engineering requirements for specific substation layouts can increase costs.
- **Installation and Foundations:** Costs may include mounting structures, supports, and labor for installation, especially in high-voltage substations .

Typical Price Range

- **Standard 35kV busbar bridges:** \$3,000–\$5,000 for basic aluminum or copper units with standard insulation.
- **Customized or high-performance units:** \$6,000–\$10,000+, particularly for copper busbars with advanced coatings or complex geometries .
