

Remote Power Supply Intelligent Type

Overview

An intelligent PDU is a power distribution unit designed to do more than supply power. It provides visibility and control — like remote outlet switching, power metering, SNMP alerts, and environmental monitoring. Power your campus environment or wherever you need power and fiber with Corning and our Intelligent Power Solutions Are you tired of dealing with network limitations, space constraints, and costly local power outlets on campus?

Our long-reach solutions portfolio can provide the cost-effective. Raritan intelligent PDUs (iPDUs) make remote power management fast, simple, flexible, and secure. Manage a single PDU or groups of PDUs simultaneously. While both ensure reliable power delivery to critical IT equipment, intelligent PDUs offer advanced features such as real-time monitoring, remote access, and power control. These smart PDUs support daisy chain connections allowing multiple PDUs to be cascaded together via Cat6 cables. All of the smart rack PDUs can be remotely. There are two types of Power Distribution Units (PDUs), the basic type and the intelligent type.
