

Safe distance from high-voltage distribution boxes in Myanmar

Overview

Here are the recommended spaces based on different voltage categories: Workers should maintain a safe distance of 1. 3) Above. Certain high voltage equipment is enclosed within a “ High Voltage Cage,” a completely gated or walled space secured with a specialized lock, housing high voltage exposed conductors that do not adhere to typical safety clearances. Whether you're buying a home, evaluating a school location, or planning a construction project, this tool offers a simple and science-backed way to estimate safe distances. EHV (Extra-High Voltage) Lines- It has a voltage level from 230 kv to 1000 kv. The multi-billion ringgit infrastructure of the National Power Grid must be duly maintain t to withstand the weather conditions and variant landscapes. Power must be channeled without failure to a proximately 8.
