

What tools are included in hot-melt optical cable tools

Overview

Each kit contains pin and socket polishing tools, jacket strippers, shears, scribes — literally all the tools and supplies required for ongoing termination and test of fiber optic systems. Polishing tools are also sold separately for factory use or as replacement parts in field. With the Hot Melt connectors, you need the same tools you need for epoxy/polish or anaerobic/polish connectors, plus a special high temperature oven to melt the adhesive before the fiber is inserted. Getting reliable network connections matters a lot for keeping people connected consistently, since when things go down it really frustrates users. Termination is easy; simply insert the connector into the oven, allow it to reach temperature while preparing the fibre end, remove the connector from the oven, fit the fibre and allow to cool. Huawei FIK01 is an installation tool for working with transparent FTTR cable that is equipped with hot melt adhesive. The tool is used to activate the hot melt adhesive and for the primary fixation of the optical cable to the surface.
