

Which quota item should be used for cable management racks

AI Overview

Cable management racks should be assigned a quota item based on their procurement type and intended use in structured cabling systems.

Determining the Quota Item

When specifying a quota item for cable management racks, you should:

- Identify the procurement type: Determine whether the racks are produced in-house or sourced from an external supplier. This classification affects the quota arrangement and reporting requirements .
- Specify the source of supply: Each cable management rack or accessory should be linked to a quota arrangement item to ensure proper tracking and compliance with procurement policies .
- Consider OEM or standard options: Use the appropriate quota item for the type of rack, whether it is a horizontal manager, vertical manager, or brush panel, and whether it is metal or ABS plastic .

Technical Considerations

While selecting the quota item, it is also important to consider the technical specifications of the cable management racks:

- Compatibility with 19-inch racks: Ensure the quota item corresponds to standard rack sizes for seamless installation .
